

3067 - Sorting and Searching I

Description

Given $1 \leq N \leq 10^3$ numbers between 1 and 10^9 , you must answer:

Between $1 \leq Q1 \leq 10^4$ questions where, for each, will be asked to determine whether a given number is or is not on the list initially provided.

Between $1 \leq Q2 \leq 10^4$ questions where, for each, are asked to know the i -th smallest number in the list initially provided (suggested sort the list).

Input specification

The first line of input the amount of provided numbers in the list: N .

The second line contains N integer numbers between 1 and 10^9 , separated by exactly one blank.

The third line contains the number of questions to ask, separated by exactly one blank: $Q1$ and $Q2$.

The fourth line contains $Q1$ integer numbers between 1 and 10^9 , separated by exactly one blank: the numbers to answer the questions of the first kind.

The fifth line contains $Q2$ integer numbers between 1 and N , separated by exactly one blank: the numbers to answer the questions of the second type.

Output specification

For each question of first type, in the order of entry, you must print a line with characters ":" if the number is provided in the initial list. Conversely, if the number is not provided in the initial list you must print a line with characters "(". Then, for each question of second type, in the order of entry, you must print a line with the i th smallest number in the list initially provided. Note that quotes should not be printed in any case.

Sample input

```
5
45 3424 999999999 5 5
3 6
999999999 54 45
4 2 3 5 1 3
```

Sample output

:)
: (
:)
3424
5
45
999999999
5
45
